

TECHNOLOGY OVERVIEW

CRITICAL POWER AND ENERGY MANAGEMENT

For complex and critical facilities

Avise Insite™ solves big challenges in the world's biggest facilities. Real-time operational and energy analytics combined with fully automated control processes provide value well beyond a simple dashboard.

Visualize

real-time, one-line operational and energy data with meaningful information engineered to give both holistic views, as well as equipment level results.

Analyze

energy trending and root cause analysis of power events in order to make educated, informed decisions and establish benchmarks and key performance indicators.

Orchestrate

historically manual processes such as emergency system testing, compliance testing and reporting, and automated demand response via simple, configurable software.

Energy efficiency AND operational resiliency.

Avise Insite provides a single system to do both.

- Energy Management
- Automated Demand Response
- Emergency Power Management
- Load Study Avoidance
- Compliance Report Creation
- Distributed Generation Monitoring and Control

TECHNOLOGY OVERVIEW

CRITICAL POWER AND ENERGY MANAGEMENT

Visualize and control your facility operations including comprehensive WAGES energy monitoring, fully automated critical power management, and energy efficiency / demand response execution and validation.

Blue Pillar Streamlines Energy Management

“After exploring the available technology, the Blue Pillar Advise® software was the only product capable of interfacing with all of our equipment assets. And it does much more and costs less than other options.”

Leo Anderson,
Appleton Medical Center

Gain “insite” into your facility with Advise Insite.

Facility Data Visualization (WAGES, EPSS, HVAC)

Behavior Trending / Reporting

Critical Power Management & Automated Compliance Testing and Reporting

Equipment Health, Loading, & Readiness Monitoring

Blue Pillar’s Advise Insite provides organizations with a consolidated, user-friendly view of their electrical and mechanical equipment.

Live View

Advise Insite provides real-time equipment diagrams encompassing all types of facility utilities including water, gas, electric, steam, etc. Live views allow for easy visualization of network status and layout of core equipment while also providing the ability to drill down into specific equipment information directly from the Live View.

Operations

For operationally focused users, Advise Insite offers real-time information about the health and readiness of your facility systems while also providing immediate alarming, reporting, and tracking of events and issues as they happen. Additionally, Advise Insite provides access to information on any mobile phone or tablet - allowing you to stay connected to your facility from anywhere at anytime.

Energy

Advise Insite provides comprehensive real-time WAGES energy tracking and trending at the site, building, and even down to the circuit level. Whether using energy data to drive energy efficiency within your facility, monitor Demand Response participation, or simply allocate energy usage across departments or buildings — Advise Insite can provide critical information to reduce your energy spend.
